

DELTA HARVESTING BELT

The Delta harvesting belt is mainly used to harvest crops into EPS boxes for fresh markets. It is available in long lengths up to 16 meters. This means that when you drive through your fixed roads in the field, you can still harvest all crops. The first four meters of the flat part in the field is semi-automatically foldable so that it is still compact during transport and storage. An optimal system is achieved when it is used with multiple harvesting trailers.

Because the set-up time between the harvesting trailers is less than three minutes, we approach a continuous harvesting process. A Delta harvesting belt eliminates unnecessary movements during the harvest, this means that the workers walk in a straight line behind the harvesting belt and they do not have to walk towards the trailer anymore. Power comes from the hydraulic circuit of the tractor, so it is plug-and-play to your equipment.

SPECS

Length
6m - 12m

Width
27cm - 57cm

Total weight
from 150kg

Efficiency
+ 40%

Capacity
4,375pcs/hour

For EPS and big boxes

4 meter semi-automatic foldable

Suitable for: Cauliflower, Broccoli, Lettuce, Endive, Green cabbage, Iceberg lettuce, Pointed cabbage, Fennel, Eggplant and Zucchini.
